Add Content Items	9
Products	9
How to edit category and subcategory pages	9

All editors for pages, blocks, categories, products and content in general work the same and have the same functionalities.

Where to edit the home page

You can find and edit the homepage content under:

Content/ Pages/... here you have to search the page with the URL Key “**home**” in the language you would like to edit

There is a “home” page loaded for every shop language in the shop. You must enter the data for every language’s page separately.

When you found the page you must click on Select/ Edit

Here you will find all page settings. In the Content tab, you will find the page builder where you can enter and edit your data.

Click on “Edit with Page Builder” and you can start editing.

Home page

← Back Delete Page Save

Page Title * Home page

Content

Content Heading

Edit with Page Builder

Enter HTML, CSS or JavaScript code

COLUMN 1 (6/12) ROW COLUMN 2 (6/12)

Load and save layout templates

You can save your shop layout as a template by clicking on the “Save as Template” button on the right upper corner

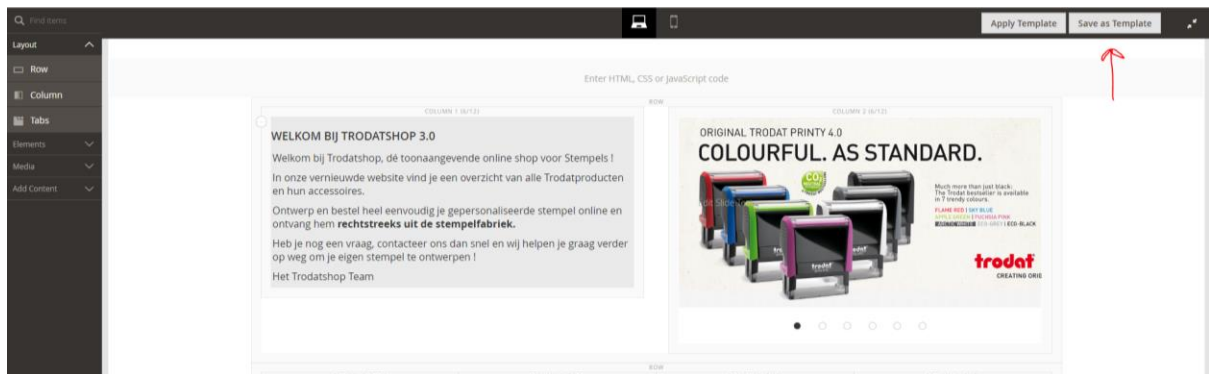

Here you can enter a name for the template

Pages

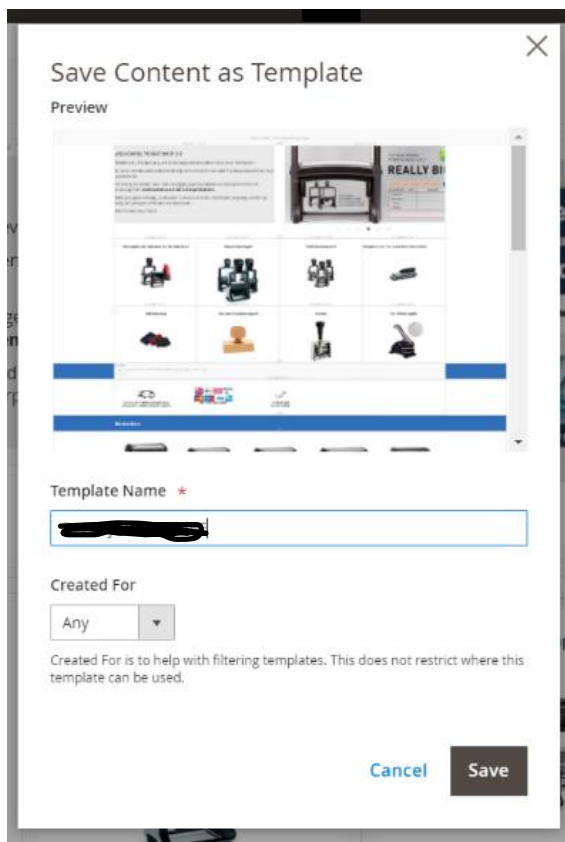

Add New Page

Actions 44 records found

ID	Title	URL Key	Layout	Store View	Status	Created	Modified	Action
72	Home page	home	1 column	Main Website Main Website Store Francais	Enabled	Aug 30, 2021 4:42:39 PM	Aug 29, 2022 1:30:51 PM	Select Edit Delete View
60	Home page	home	1 column	Main Website Main Website Store Dutch (BE)	Enabled	Jun 23, 2020 3:12:43 PM	Sep 6, 2022 4:04:05 PM	

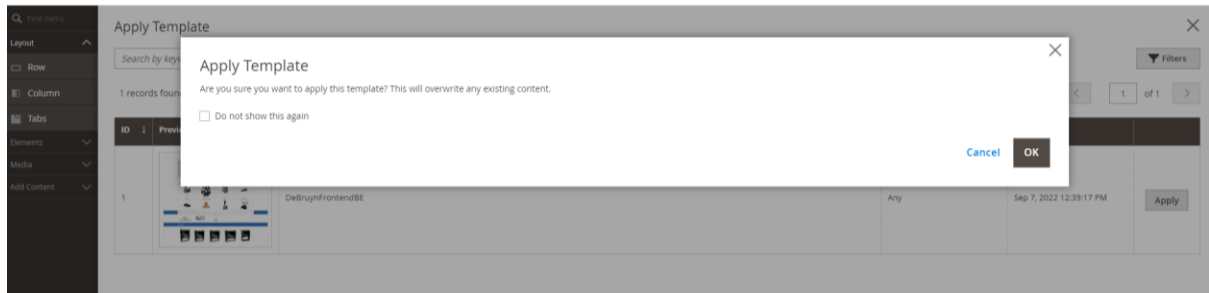

Here you can enter a name for the template

Now, when you need the layout for another shop view you can just open the page builder on said page and load it by clicking on “apply template” next to the save template button.

The template will then be loaded to this editor.

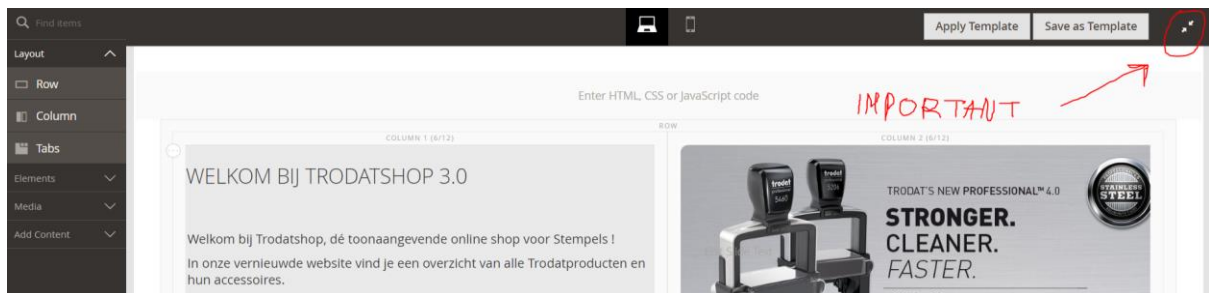

How to save your changes

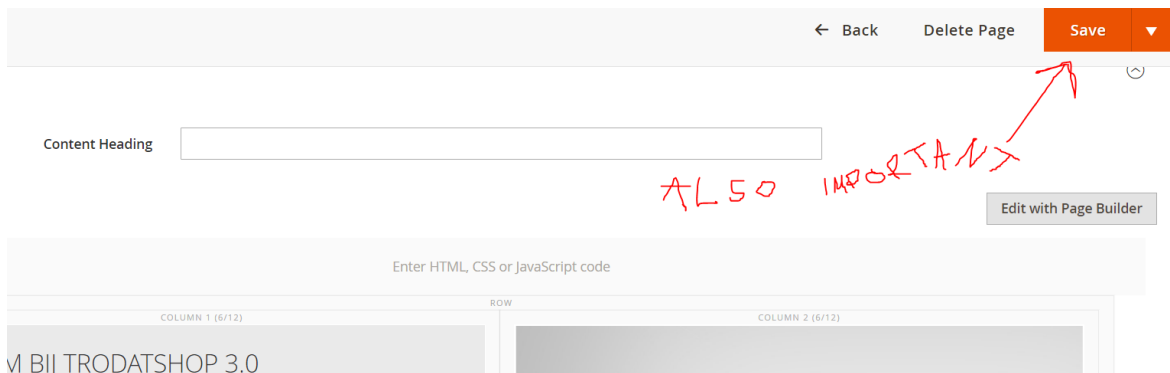

When you are done editing the content, you must **minimize the window** first, and then click **SAVE**

Otherwise, your changes will not be saved.

1st

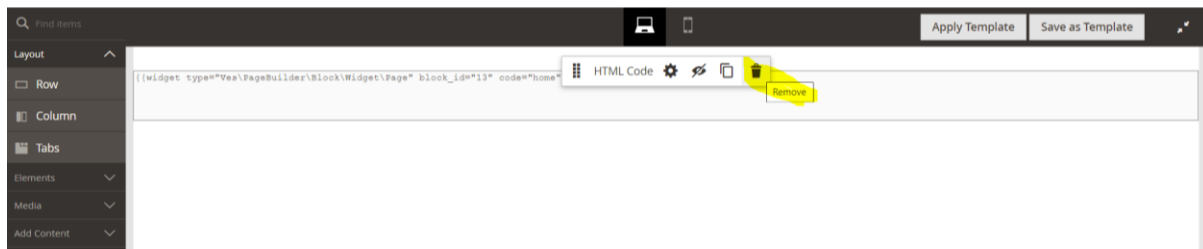

2nd

Delete old HTML block

First, you need to delete the old html text which is pre entered.

Hover over the html block, click on Remove and delete the whole row. Afterwards you can start the editing

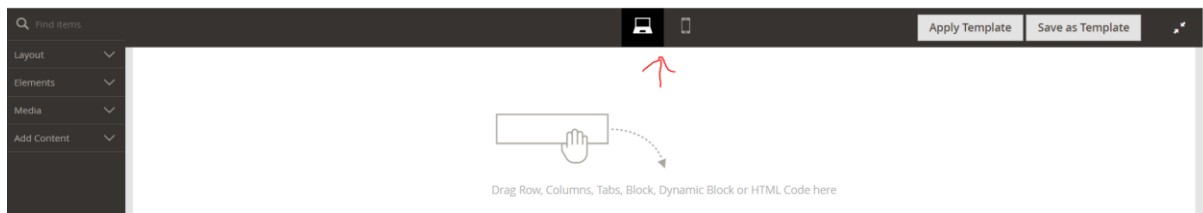

Layout Items and Features

Mobile and Desktop view

Centered top you will find the possibility to switch between desktop view and mobile view.

The data you enter in desktop view will automatically apply to the mobile view. If something needs to be customized for the mobile view (e.g. line breaks, padding,...) you can do this on the mobile view manually.

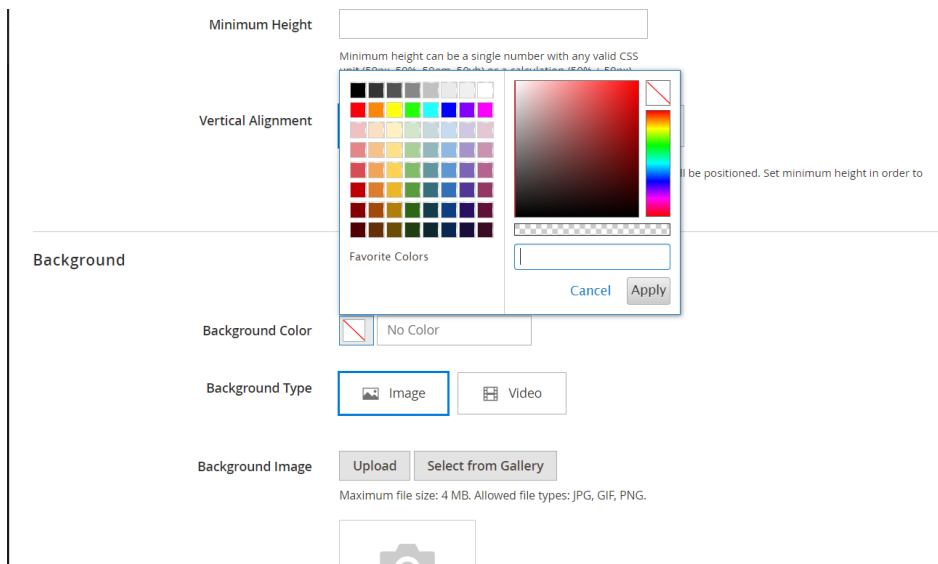

Rows

As already written on the screenshot above: the whole page builder works with drag and drop. Means, that you just click on the item, hold it, and drag it to where you need it.

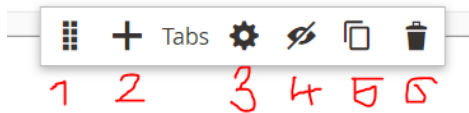

Every item must be placed in a Row. If you would like to enter a heading, image or whatever, you first need to add a row. On a row you can then either directly drag and drop what you need, or you enter a Column.

You can edit a row by hovering over it and then clicking the gear wheel. Here you can edit the appearance, the margins and padding, the border, and most importantly the background.

Regarding the background and border color you can either select the color there or enter your color code if you need a specific one.

You can edit all other items the same way you edit a row. Hover over them and this will appear

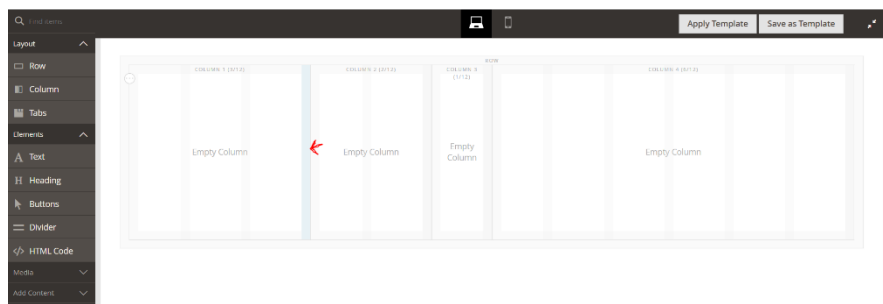

1. Move the item to another row (with drag and drop)
2. Add a slide (here for tabs. Also visible for columns)
3. Edit/ settings
4. Hide – here the item will be invisible on the frontend, but still present in the backend
5. Duplicate – here you can duplicate the item and drag and drop it somewhere in case you need it several times (also to add more buttons and slider slides)
6. delete

Columns

A column divides the row in multiple columns, so you can place several items next to each other. The layout and ratios that are shown here are also the same that apply on the front end.

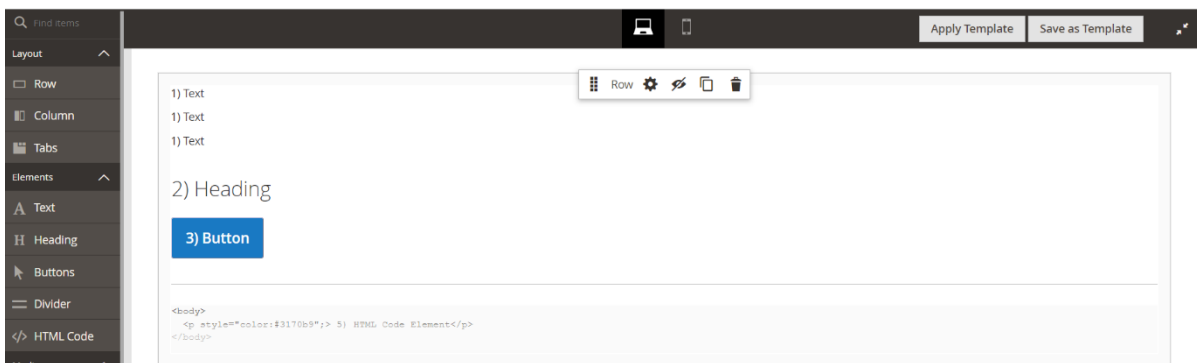

If you want to change the ratio of the columns, just move them around by clicking on the left or right end of the columns in the middle

Tabs

Tabs are similar to handle like columns. But instead of being displayed next to each other, you can just select the tab you wish and it will be then displayed in full width.

Element Items and Features

Text

With the text element you can write a text and then format it. Additionally, you can also insert images, tables, insert a link on your text, add special character, variables or widgets.

Heading

You can insert headings on top or on the bottom of your items by dragging them there.

There are 6 different heading types available, so if you would like to have a more customized heading, you should probably use the Text feature as a substitute. This actually has many advantages e.g. you are able to insert links on the text, you can change the font + font color + all 6 heading types are also to find there under "Formats".

Buttons

By clicking the edit button by hovering over the button, you can select the text of the button, the alignment and where it should be linked to.

If you have multiple buttons you have to hover over a blank space in the row and then click on the edit button. Here you can edit some more general button settings.

The color of the buttons can not be selected here. This information is entered under *Stores/ Configuration/ Trodat Themes/ Theme Design/ Primary Buttons*

Divider

The divider element is the light grey line you can see under the button.

I came to realize that this divider is very useful, because the rows tend to have very little space between each other in the frontend

HTML Code

Here you can either enter a HTML Code, insert a widget or variable

Media Items

Image

With the image tool you can either upload or select an image from the gallery.

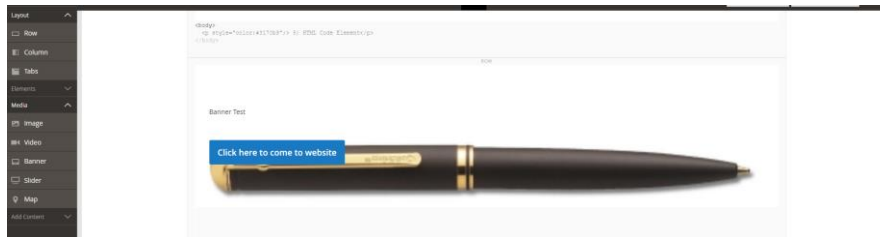

It is also possible to Add a link to the image

Video

You can not upload a Video, you have to enter a URL link (e.g. youtube)

Banner

You can create your own banner by either uploading an image, entering a text into the banner, or even a link or button.

Slider

You can add slider slides by clicking on the duplicate button.

You can upload or select images from the gallery, set a background color, enter a message or add a link or button to the slide.

Map

Enter Google Maps API Key in *Stores/ Configuration/ General/ Content Management/ Advanced Content Tools*

Add Content Items

Products

Here you can decide whether to select items based on category, SKU or condition.

Condition e.g. customizable, new, active from

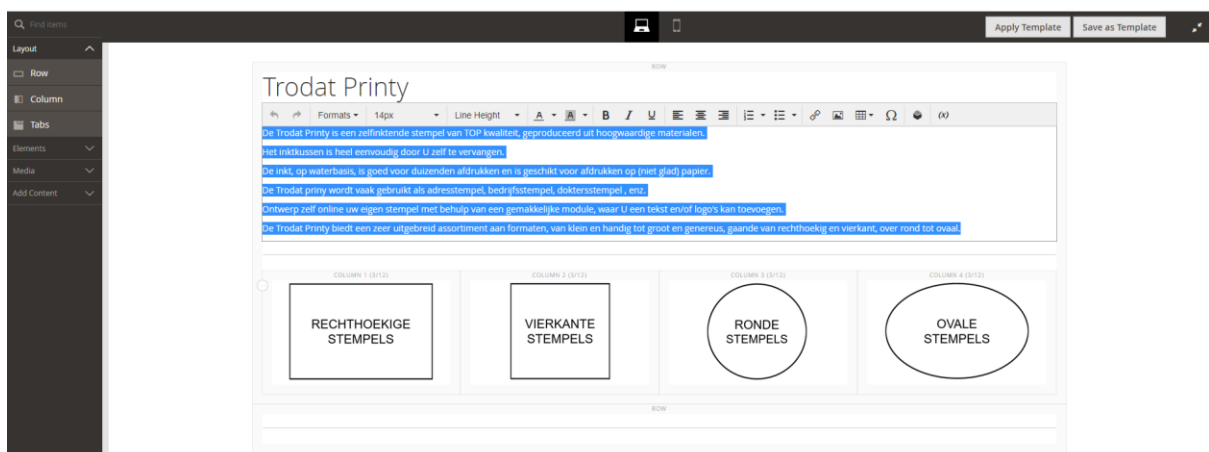

How to edit category and subcategory pages

Go to *catalog/ categories* and click on the category/ subcategory you would like to edit

Click on the “content” tab and start editing just like in edit/ pages

If you want to edit a text field, open it completely by clicking on the “edit” wheel, and enter the information there. Otherwise, the changes will not be saved.

Don't enter it here:

Enter it in the editing area here:

The image shows a screenshot of a WYSIWYG text editor. On the left is a dark sidebar with navigation options: 'Find items', 'Layout', 'Row', 'Column', 'Tabs', 'Elements', 'Media', and 'Add Content'. The main editor area is titled 'Edit Text' and has a 'Close' button and an orange 'Save' button in the top right. Below the title bar is a rich text toolbar with icons for undo, redo, font size (14px), line height, text color, background color, bold, italic, underline, bulleted list, numbered list, link, unlink, insert table, link icon, unlink icon, and a '00' icon. The text area contains the following Dutch text:

De Trodat Printy is een zelfinkende stempel van TOP kwaliteit, geproduceerd uit hoogwaardige materialen.
Het inktkussen is heel eenvoudig door U zelf te vervangen.
De inkt, op waterbasis, is goed voor duizenden afdrukken en is geschikt voor afdrukken op (niet glad) papier.
De Trodat priny wordt vaak gebruikt als adresstempel, bedrijfsstempel, doktersstempel, enz.
Ontwerp zelf online uw eigen stempel met behulp van een gemakkelijke module, waar U een tekst en/of logo's kan toevoegen.
De Trodat Printy biedt een zeer uitgebreid assortiment aan formaten, van klein en handig tot groot en genereus, gaande van rechthoekig en vierkant, over rond tot ovaal.

At the bottom right of the editor area, it says 'POWERED BY TINY'.
